1) Held extra office hours and extremely helpful (: 

2) best TA ever!

3) The TA was very helpful in teaching me the course. He went over certain material that was not clarified in class. He was enthusiastic and kept the section interesting and lively. He was very easy to meet outside of section for additional help. I definitely recommend this TA.

4) I have a job and could not attend his discussions but from what I hear he was great.

5) Franklin Kenter is an amazing TA. I strongly recommend him.

6) Very helpful and resourceful.

7) TA had trouble explaining problems, or would sometimes make mistakes within problems and have to go back in the end to fix the problem.

8) Frank Kenter is the bees knees. He definitely helped out with learning the concepts behind the problems we encountered not just teaching us shortcuts, although he did provide us with information that would facilitate our test taking skills, like simple identities to remember and things like that. He also gives out a lot of candy which everyone can appreciate. Sections didn't help because I never really needed help on the homework, but that should not detract from the great job Frank did.

9) He explains things very well and is extremely helpful. A++

10) He was very prepared and encouraged students to participate and ask questions. Although we do not go through all the problems asked most of the time, what is gone over is very helpful to the course.

11) He just needs to work on not blocking the board while he writes. He's a funny guy and still gets the job done.

12) The TA explains the material that most students need help with very well and provides extra practice problems at the beginning of class that illustrate key concepts of the course.

13) Great TA

14) Fantastic

15) TA tries to make sure everyone understands what is being taught and is caught up with what we need to know.

16) Franklin makes a genuine effort to connect with his students, and it is evident that he enjoys teaching. Very approachable and communicates math well.

17) Boring. I only went to copy answers to the harder homework problems. But I never really understood what was going on in section. I was always really lost. I never said anything though because he would be like "are there any questions" and I felt too dumb to say can you explain from the beginning because that's what I needed, and he would just say "which part don't you get?".

18) Math is hard ;(
