1) In his left hand he holds the coffee of brain nourishment, and with his right he wields the chalk of logic and reason. Majestically, he stands before the chalkboard of trial as his students batter him relentlessly with questions. A lesser man would quail before the furious onslaught, but not Franklin. His explanations resound with the power of personal experience. It is clear from the gleam in his eyes as he dispatches each incoming proof with ease, that this is a man who has trained himself well in the mathematical arts. No doubt he has spent many days training near high mountain springs, meditating underneath the brusing force of a raging waterfall of prime numbers. With peerless wit and sagacity does Franklin descend upon the ignorant masses, lighting the candle of our enthusiasm with the flames of his own. Here is a man to whom many wandering TAs must bow their heads in respect, for both his intelligence and devotion to his pupils place several standard deviations above the mean. When applied to Franklin, the title of “TA” is an acronym for “Truly Awesome.”

2) Franklin is the best!

3) He's pretty much the best T.A I've had in the math department. I have no complaints. He has a passion for the subject and is very engaging to the students. He goes out of his way to help the students and always shows a lot of understanding and respect.

4) Franklin is so awesome. He's nice, friendly, smart, approachable, and extremely helpful. I'm sad he won't be one of my TAs next quarter. :

5) Franklin has a unique way of teaching students what they should be learning. He is thorough and insightful in all of his teachings and explains every step necessary for the student to understand what is being discussed. Also a very nice person.

6) What would math be like without Franklin Kenter? I couldn't answer that; if he had not been my TA for multiple quarters now, I would've dropped the major long ago.

7) Franklin, TA for MATH 102 please!!!!!!
